SIFATEC – Innovations in Scaffolding – Part 1

It's great that you're interested in our products and services.

First of all, a few words on our work: In 1999 we, the company Simon, founded SIFATEC-Sicherheitservice (SIFATEC Safety Services). This step was made possible by an entirely new fastening technology. The basic concept was that when working on flat roofs, the first step to be carried out is the mounting of guardrails and the very last step is the dismantling of these. Extending out from the roof's edge, SIFATEC thus makes an absolutely barrier-free work zone on the surface of the roof possible. We now have a fleet of 26 tonne lorries, fitted out to the highest specifications and with cranes up to 30m high, and up to 50 km of flat roof sideguards in permanent operation for our customers. On-time service, punctuality, honesty and fair prices always come first for me. You can rely on that!

Karl Josef Simon, Master Roofer

Whether flat or square, round or offset: with SIFATEC guardrails you're always on the safe side.

Even in the most challenging conditions, you can rely on the SIFATEC system.

Partner of the Future

Certified safety.

High level of compatibility.

Efficient and safe.

For the installation of its photovoltaic system, the Fritz-Walter-Stadion in Kaiserslautern was completely fitted out with SIFATEC

Even on corners and edges: safe assembly on

The patented SIFATEC Scaffolding system knows almost no bounds. Neither amount nor length.

There are many challenges in the field of roofing. But the issue of safety should always have priority, regardless of how the building site is set up. With the patented SIFATEC flat roof guardrail every building site is quickly and safely fitted out.

Secure in long lines, outside corners or inner corners, in angles and on slants. Even offset heights can be accommodated without problem. On request, a stairwell can also be built. This is ideal to round out the flat roof scaffold.

All over Germany our assembly team constructs the scaffolds punctually and reliably on the desired building site. In this way you save time and money, but not at the expense of safety.

Ask for an individual quote. You'll be astonished how affordable safety can be.

Whether it's 3, 8 or 15 floors: safety always comes first and SIFATEC ensures freely accessible roof surfaces.

SIFATEC allows you to overcome every challenge.

on all roofs.

Barrier-free work.
Certified safety.
Even on curves.

Flat roof guardrail with stairwell. Optimum and secure work.

Sifatec

For solar builders too.

The constant search for uncomplicated approaches

- for classic flat roofs with roofing membrane
- corrugated metal roofs, standing seams or Kalzip

You send us photos or plans of the layout,
we scaffold for you. Punctually. Reliably.

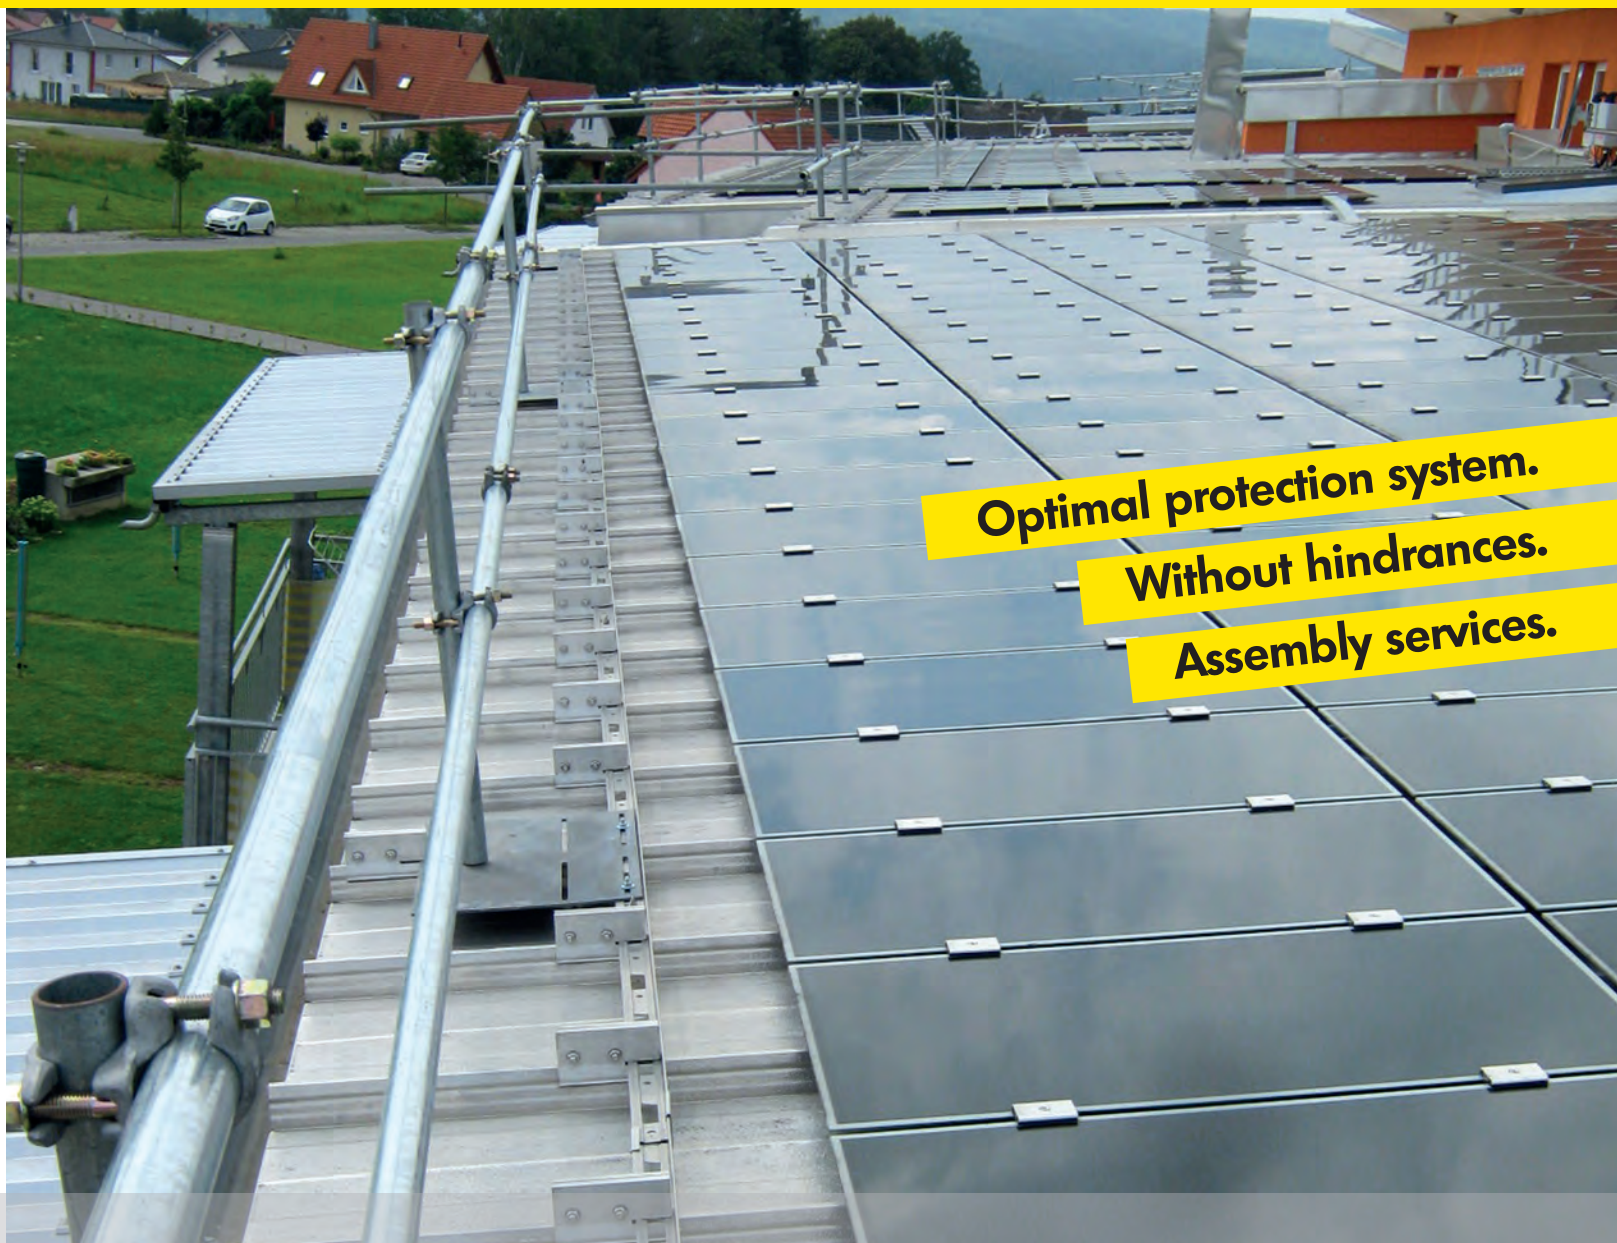

Thus you can concentrate on your work and we
take care of safety.

A configuration up to close to the roof edge is possible.

Solar builders can rely on this: free roof surfaces and highest levels of safety from SIFATEC.

**Optimal protection system.
Without hindrances.
Assembly services.**

Freely accessible roof surfaces, work without hindrance but with the greatest possible safety. That is the patented SIFATEC system.

Sideguard hall construction.

What has long been proven when it comes to flat roofs, is also superbly suitable as sideguards for steel halls.

Attention hall builders!

- whether it's rooftop protrusions,
- external gutters,
- straight walls or
- protruding fascias:

With SIFATEC none of that is a problem.

Simple and efficient: the SIFATEC scaffolding system.

Safety, as required by the German Building Trade Association (Bau-BG).

A large, modern industrial building with a light blue metallic facade is under construction. A complex Sifatec scaffolding system is erected against the building, featuring multiple levels and a central vertical access tower. The building has large, dark window openings. The construction site is on a grassy area with some dirt mounds. The sky is clear and blue.

**Certified safety.
Germany-wide service.**

Revolving security up to 100m high: with SIFATEC safety comes first.

What our satisfied customers say:

The simple execution and uncomplicated method of assembly as well as trouble-free work was not only appreciated by me but also by my staff. The 100m flat roof guardrail isn't enough anymore. Please come and deliver another 200m as quickly as possible.

TOP-DACH GmbH, Stuttgart

Following our 100% positive experiences with your service and your products we considering whether we will buy 80-100m of your guardrails with mounting mechanism. Please prepare a quote for this amount, including the base plates, as these also have to be purchased.

A. + W. Salm, Bedachungs GmbH, Burbach

The crucial point was that your system is very versatile and that there were no disturbances (stumbling hazards) on the roof surface during the roofing work.

DENNE Bedachungen, Solingen

Thank you for the prompt delivery and here's to continued good cooperation.

Bielefeld&Stolte, Warburg

I'd like to thank you for the punctual and very good service. With best wishes for much success.

WIENECKE Bedachungen, Dannenberg

We were very interested and delighted to take note of your activities. Once again an impressive confirmation that the innovation capabilities of this craft time and again, and not without reason, reaffirm the good reputation of the industry.
